

Different types of requests :

GET :

- /availableInterfaces → Html page
- /availableInterfaces/Json → Json description of available interfaces
  
- / → Page with drop zone
- / <portNumber> → Page with drop zone and interface corresponding to <portNumber>

POST :

- faust content + url you want to replace → new URL to include in the HTML
  - IF url is empty = new window
  - IF not replaces the DSP in the window corresponding to posted url

➔ Completely transparent for the user : when he drops a file, the interfaces appears or is replaced
