SCRIPT NAME

examples/hash_option.pql

DESCRIPTION

This example demonstrates the use of the 'hash' option. With the 'hash' option input data sorting is not required — the data will be aggregated in memory. For this reason the 'hash' option should only be used when the total number of groups is small depending on the amount of available memory.

1. PROCESS DETAILS

Input records are read from standard input. The input record contains **8** fields. Fields are delimited by the '|' character.

Output records are written to standard output. The output record contains **9** fields. Fields are delimited by the '|' character.

Input records are **grouped** by the input field **LOCATION** (*string*).

1.1 LOCATION

Output Field

Description

Set to input field **LOCATION**

1.2 MIN_COST_PRICE

Output Field

Description

Min aggregation on input field **COST_PRICE**.

1.3 MAX_COST_PRICE

Output Field

Description

Max aggregation on input field **COST_PRICE**.

1.5 SALES_CODE_1

Output Field

Description

First aggregation on input field **SALES_CODE**.

Aggregation condition

`_DISTINCT_SALES_CODE == 1;`

1.6 SALES_CODE_2

Output Field

Description

First aggregation on input field **SALES_CODE**.

Aggregation condition

_DISTINCT_SALES_CODE == 2;

1.7 SALES_CODE_3

Output Field

Description

First aggregation on input field **SALES_CODE**.

Aggregation condition

_DISTINCT_SALES_CODE == 3;

1.8 SALES_CODE_4

Output Field

Description

First aggregation on input field **SALES_CODE**.

Aggregation condition

_DISTINCT_SALES_CODE == 4;

1.9 SALES_CODE_5

Output Field

Description

First aggregation on input field **SALES_CODE**.

Aggregation condition

_DISTINCT_SALES_CODE == 5;

2. CONFIGURATION SETTINGS

2.1 *prefix*

directory pathname prefix.: examples

2.2 *pequeldoc*

generate pod / pdf pequel script Reference Guide.: pdf

2.3 *detail*

Include Pequel Generated Program chapter in Pequeldoc: 1

2.4 *script_name*

script filename: examples/hash_option.pql

2.5 *header*

write header record to output.: 1

2.6 *optimize*

optimize generated code.: 1

2.7 *hash*

Generate in memory. Input data can be unsorted.: 1

2.8 *doc_title*

document title.: Hash Option Example Script

2.9 *doc_email*

document email entry.: sample@youraddress.com

2.10 *doc_version*

document version for pequel script.: 2.2

3. TABLES

4. TABLE INFORMATION SUMMARY

4.1 Table List Sorted By Table Name

5. EXAMPLES/HASH_OPTION.PQL
