SCRIPT NAME

examples/messages.pql

DESCRIPTION

Demonstrates the use of display-message section types. Each of these sections will display the message contained in the section argument if any of the condition items match the current record. The 'abort' version will cause Pequel to abort the processing after the message has been displayed. Messages are displayed to the standard error (STDERR) output. Message text can contain input and output field names which will be interpolated with their value unless the field name is enclosed within quotes.

1. PROCESS DETAILS

Input records are read from standard input. The input record contains **9** fields. Fields are delimited by the '|' character.

Output records are written to standard output. The output record contains **2** fields. Fields are delimited by the '|' character.

Input stream is **sorted** by the input field *location* (string).

Input records are **grouped** by the input field *location* (string).

1.1 *location*

Output Field

Description

Set to input field *location*

1.2 *num_products*

Output Field

Description

Distinct aggregation on input field *product_code*.

2. CONFIGURATION SETTINGS

2.1 *prefix*

directory pathname prefix.: examples

2.2 *pequeldoc*

generate pod / pdf pequel script Reference Guide.: pdf

2.3 *detail*

Include Pequel Generated Program chapter in Pequeldoc: 1

2.4 *script_name*

script filename: examples/messages.pql

2.5 *header*

write header record to output.: 1

2.6 *optimize*

optimize generated code.: 1

2.7 *nulls*

print zero for null numeric/decimal.: 1

2.8 *doc_title*

document title.: Message Sections Example Script

2.9 *doc_email*

document email entry.: sample@youraddress.com

2.10 *doc_version*

document version for pequel script.: 2.3

3. TABLES

4. TABLE INFORMATION SUMMARY

4.1 Table List Sorted By Table Name
